

Neural ablation comparisons

Compact attention: 857 parameters · no-attention: 569 · Original23K: 22,369

● Negative difference ● Positive difference ★ Holm-adjusted difference detected ○ ASPH h=5 descriptive only

Summary: no-attention had lower RMSE in 5/6 cells; compact attention had lower RMSE than Original23K in 5/6 cells.

Difference = comparator RMSE – compact-attention RMSE. Negative values favor the comparator; positive values favor compact attention. Non-detection is not evidence of equivalence.
